Cultivator Tractor

Offset tractors for cultivation have been out of production for some 20 years

Now a small company in the Southeast has begun to fill that gap. They take new Kubota L3000 and offset engine to the left so that driver has unobstructed view of belly mounted cultivators

Actually they have extended front and rear axles to the right, adjusted tractor controls and fabricated a system to raise and lower cultivator assembly.

Selling for under \$18,000, it fills a serious gap for middle scale market gardeners.
