New Accurate, Affordable Seeder

Accurate seeding saves labor in thinning and improves plant vigor with uniform spacing. Until now you could have low cost but crude seeders or you could pay \$2,000 or more for a precision Stanhay belt seeder or \$2,500 for an Overum push seeder.

Today there is an excellent alternative seeder that is very accurate yet less than half the cost of a Stanhay; The "Jang" seeder uses interchangeable rollers with "seed wells" appropriate for different crops. There are some 20 rollers to choose from.

Five sizes of front and rear sprockets permit many seed spacing options. The transparent plastic seed hopper allows you to see operation and is easily removed to dump unused seed, allowing you to change seed types quickly.

Single line AP-1 costs \$350.⁰⁰ with one roller, alternative rollers are \$20 each. The AP-21 allows you to seed (2) lines at a time with 3" - 8" between lines. Costs \$750.⁰⁰
