

# Traditional End Wheel Drills

This type of drill does grain and cover crop mixes, driven by large end wheels making it suitable for use with (2) wheel tractors, horses as well as tractors with 3 pt. systems. You can choose models from 1.05 meters to 3 meters wide with knife openers, disc openers or double disc openers. Long out of production in USA, these are well made models from Italy.

The model pictured below is a 1.2 (47") meter model with 11 knife openers that costs \$6,800 at your nearest port. Elsewhere on this website you will see it being used behind a Goldoni Walking and behind a Goldoni 4 x 4 tractor.
