Used/Near New Dema Greens Planter

This is a 48 inch wide model high density seeder ideal for Greens' planting. Known as a Dema Magica 120, it has a front mount flange so it can be pulled by walking tractor. The same unit can be equipped with an "A" frame for use on small four wheel tractor with Cat I 3 pt.

The seed metering drum is drilled with four sizes of seed wells to accommodate different seed sizes. A single lever selects the desired seed size by shifting drum laterally. A system of bevel gears transmit power from rear ground roller to turn seed rotor at the desired speed. A clever system of sliding bevel gear allows you to control seed rotor speed that determines seed interval down the row. Planting depth is set by moving a single lever.

Price is \$8,500 where it is now located on East Coast. New costs last quoted was \$11,500, makes this unit a very good deal. I originally sold it to current owner in 2002. It was used one season and then stored indoors. By all indications, it is in near new condition. Apparently soil conditions and weather pattern caused farm to change crop choices.
